### Part B – Program

#### Creating Advanced Visualizations in Tableau

a) Create stacked and grouped bar charts for comparison

## b) Build treemaps and pie charts for part-to-whole analysis

## c) Design scatter plots to identify relationships

## d) Create dual-axis and combination charts

## e) Develop histograms for distribution analysis

## f) Build box-and-whisker plots

## g) Use Gantt charts and advanced date visualizations

## DASHBOARD:

## Observation

The Tableau dashboard successfully presents the expense data using multiple advanced visualizations. The **bar charts** show that Shopping has the highest total amount, while Transport has the lowest. The **pie charts** display the distribution of expenses across different categories and payment modes. The **bubble chart** compares payment modes based on transaction amounts, with Cash and UPI showing significant values. The **line charts** illustrate monthly changes in Amount and Budget, showing noticeable variations across months. The **box-and-whisker plot** compares Budget and Amount distributions and highlights variations and outliers. Overall, the dashboard provides a clear visual comparison of **categories, payment modes, monthly expenses, budgets, and spending patterns**, making it easier to analyse financial data and identify areas of high expenditure.
