Data Preparation and Transformation using Tableau Prep

a) Connect and load data into Tableau Prep

Step 1: Select connect to data and click on the text file to upload all three file and the data will be loaded and shown.

The screenshot displays the Tableau Prep interface. On the left, the 'Connections' pane lists three text files: 'Course_Credit_Mast...', 'Student_Assessmen...', and 'Student_Assessmen...'. The 'Tables' pane shows 'Student_Assessment...'. The main workspace shows three data sources connected to 'View and clean data' blocks. Below this, the 'Input' section shows '10 fields' and '3 Recommendations'. The 'Data Preview' section shows a table with 10 fields: #, Source-Row Num..., Std_ID, Full_Name, Dept, and Exam_Type. The table contains 13 rows of data.

#	Source-Row Num...	Std_ID	Full_Name	Dept	Exam_Type

b) Clean and profile data

Step 1: Click on the Clean steps.

Step 2: After clicking on it the data will have changes shown below.

The screenshot shows the data preview for the 'Clean 1' step. The interface includes a 'Publish' button and 'Alerts (C)' in the top right. The data preview shows 9 fields and 18 rows. The fields are: Student_ID (9), Student_Name (9), Department (12), Assessment_... (2), Exam_Date (12), and Subject_Code (7). The data is displayed in a table format with columns for each field and rows for each record.

d) Merge mismatched fields

Step 1: Create a union by moving Clean 2 to Clean 1

Step 2: Below you saw the mismatched fields you need to drag and add the same like Student_ID to Std_ID, Dept to Department

The screenshot shows the 'Union 1' settings panel. At the top, it says 'Union 1 18 fields 36 rows'. Below this are tabs for 'Settings' and 'Changes (0)'. Under 'Inputs', there are two items: 'Clean 1' with a blue square and 'Clean 2' with an orange square. Under 'Resulting Fields', it says '16 Mismatching fields from 18 resulting fields.' Under 'Mismatched Fields', there are three items: 'Full_Name' with a blue square and an orange square, 'Student_Name' with a blue square and a grey square, and 'Std_ID' with a grey square and an orange square.

Step 3: You will saw the merged values of both Student_ID and Std_ID do the same for others as well

The screenshot shows a data table with a header row and a body of data. The header row has a blue bar and an orange bar. The body of the table has a column labeled 'Student_ID' with a value of 9. Below this are several rows of data, each with a value in the 'Student_ID' column. The values are: \$101, \$102, \$103, \$104, \$105, \$106, \$107, and \$108.

Step 4: Now click and do for all other mismatched files and you will see all done as shown below

e) Perform aggregations in Prep

Step 1: Add clean step for Union 1.

Step 2: Above the table you will see Create Calculated field and fill the details shown below as Field Name and Formula then Apply and Close.

Step 3: You will see the output after changes shown below

Step 4: Select Clean 9 and add Aggregate .

The screenshot shows the Tableau interface with the following components:

- Top Bar:** Navigation icons, 'Publish' button, and 'Alerts (0)'.
- View:** A workflow diagram showing 'Student_Ass...' data sources, 'Clean 1' and 'Clean 2' steps, 'Union 1', 'Clean 9', and 'Aggregate 1'.
- Aggregate 1 Configuration Panel:**
 - Settings:** 'Additional Fields' section with a search bar and 'Add All'/'Remove All' buttons.
 - Grouped Fields:** A list of fields to be grouped: Assessment_Type, Dept, Enrollment_Status, Exam_Date, Full_Name, Marks_Obtained, Student_ID, and Subject_Code.
 - Aggregated Fields:** A section for fields to be aggregated.

Step 5: Now add Term, Full Name, Student_ID, Dept

Grouped Fields			
GROUP	GROUP	GROUP	GROUP
Term 2	Full_Name 18	Student_ID 9	Dept 9
Term1	Aarav Sharma	S101	Computer Science

Step 6: Add the other three in Aggregate Fields as well.

Step 7: Now in Aggregate 1 we need to click on Clean Step and the Clean 10 will created open it

Step 8: Below show the final output.

Calculation is valid

Create with Tableau Agent

Apply Apply and Close

ABS(number)

Returns the absolute value of the given number.

Example: ABS(-7) = 7

Step 4: See the changes below

Step 5: Add Letter_Grade and its formula

Add Field

Field Name: Letter_Grade

 ELSEIF [Term_Percentage] >= 75 THEN "B (First Class)"
 ELSEIF [Term_Percentage] >= 60 THEN "C (Second Class)"
 ELSEIF [Term_Percentage] >= 40 THEN "D (Pass Class)"
 ELSE "F (Fail / Re-appear)"
 END

Calculation is valid ^

Create with Tableau Agent

Apply Apply and Close

ABS(number)
 Returns the absolute value of the given number.
 Example: ABS(-7) = 7

Search: ABS, ACOS, AND, AREA, ASC, ASCII, ASIN, ATAN, ATAN2, AVG, BUFFER, CASE, CEILING, CHAR, CONTAINS, COS, COT, COUNT, COUNTD

Step 6: Add Academic_Standing and formula as shown below

Add Field [X]

Field Name: Academic_Standing

IF [Term_Percentage] >= 60 THEN "Satisfactory"
ELSE "Academic Probation (<60%)"
END

Calculation is valid ^
